ACADEMIC OPERATING GUIDE

# Role workflows and access

*How semester decisions move through campus delivery, faculty planning and the student view.*

| 01 | 02 | 03 | 04 |
|---|---|---|---|
| **Global academic setup** | **Campus delivery** | **Teaching execution** | **Read-only student view** |

## Operating principle

Authority flows downward by role and campus scope. Progress, exceptions and reports flow upward. Every person sees only the campuses, batches and subjects assigned to them.

- Administrator / Program Manager — all campuses
- Campus Manager — assigned campus
- Faculty and Visiting Faculty — assigned subjects and classes
- Student — enrolled campus and batch, read only

01 · END-TO-END FLOW

# From semester setup to the student view

*The platform connects administrative planning, campus scheduling and classroom delivery in one controlled chain.*

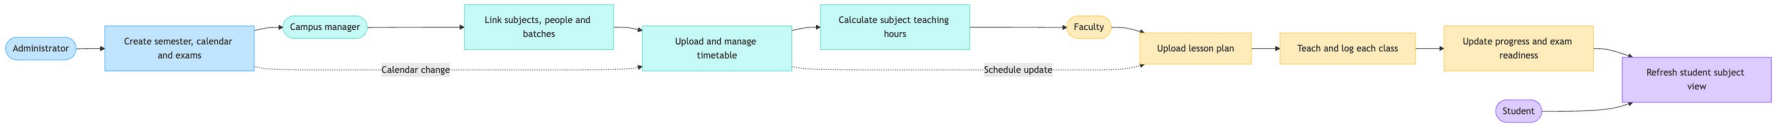

**Figure 1 · End-to-end academic delivery flow**

**What changes downstream:** A calendar or exam-window change recalculates affected classes, planned dates, available teaching hours, progress and exam readiness before it reaches the student view.

# Authority follows campus and subject scope

*Each role receives the minimum scope needed to complete its part of the academic workflow.*

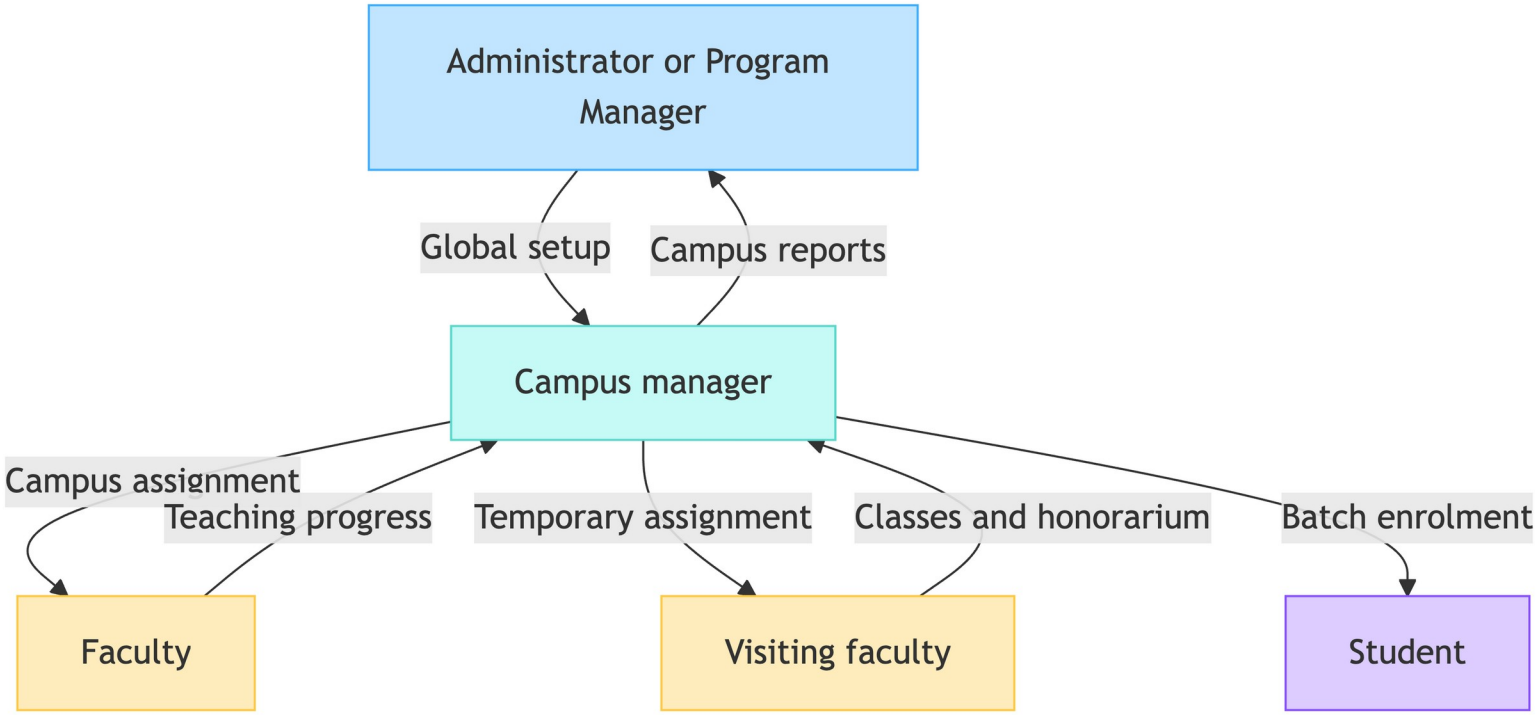

Figure 2 · Role hierarchy and reporting paths

| Global | Campus | Assigned work |
|---|---|---|
| Administrator and Program Manager configure all campuses and review cross-campus intelligence. | Campus Managers operate only inside their assigned campus and manage delivery. | Faculty see assigned teaching; students see enrolled subjects and outcomes. |

# Leadership and campus operations

*Administrative roles establish the academic structure and keep delivery aligned when conditions change.*

## Administrator / Program Manager · All campuses

### Can do

- Create semesters and maintain calendars, holidays, working days and exam windows.
- Create subjects; manage users, campus managers and campus assignments.
- Review notifications, reports, exports, audit history and AI summaries.

### Can see

- Cross-campus progress and teaching delivery.
- Faculty activity and exam readiness.
- Campus, subject, batch and track analytics across the organisation.

## Campus Manager · Assigned campus

### Can do

- Create or link subjects, batches and people; assign faculty to subjects.
- Upload and edit the full timetable, alter a particular class, and add extra classes.
- Maintain permitted calendar changes and manage visiting-faculty per-class rates.

### Can see

- Campus subjects, timetable, lecture delivery and faculty activity.
- Progress, exam readiness, notifications and campus reports.
- Visiting-faculty class counts, approved payments and honorarium totals.

# Teaching and student experience

*Teaching roles convert assigned hours into lesson plans and recorded delivery; students receive the resulting read-only view.*

## Faculty · Assigned subjects only

### Can do

- Upload a partial or full-semester lesson plan and manage planned dates.
- Record daily lecture delivery and respond to schedule-change notifications.
- Use optional WhatsApp logging when that integration is enabled.

### Can see

- Assigned hours, upcoming classes, covered and pending topics.
- Subject progress, buffer ratio, exam readiness, AI insights and own reports.
- Notifications only for assigned subjects and teaching actions.

## Visiting Faculty · Assigned subjects and classes

### Can do

- Follow the Faculty workflow after receiving subject access.
- Record classes actually delivered for approval and payment.

### Can see

- Assigned hours, timetable and subject plan.
- Personal delivered-class count; honorarium is calculated per approved class.

## Student · Enrolled campus and batch · read only

### Can do

- No academic editing or access-management actions.

### Can see

- Enrolled subjects and assigned teachers.
- Covered and upcoming topics, exam dates and syllabus scope.

# Calendar changes trigger targeted updates

*The system identifies impact first, asks the responsible faculty member when a teaching decision is required, and then refreshes dependent views.*

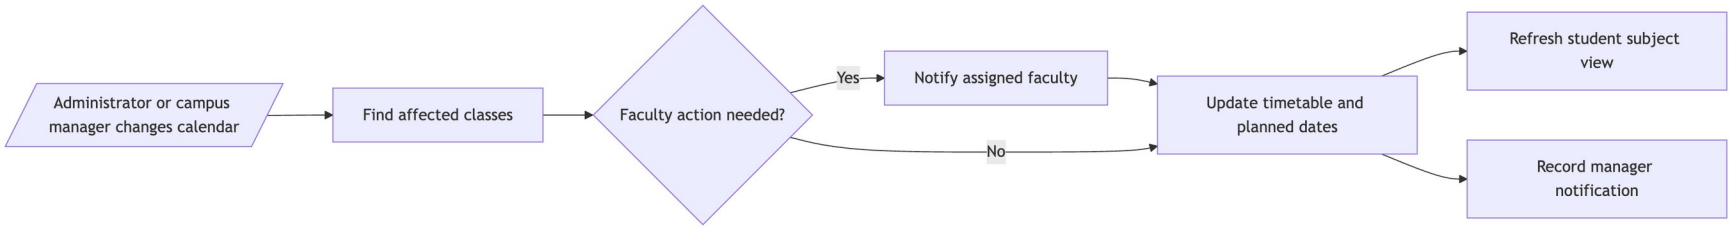

Figure 3 · Impact, decision and notification flow

| 1 Detect | 2 Decide | 3 Re-align | 4 Notify |
|---|---|---|---|
| Find every future class affected by the calendar or exam-window change. | Ask the assigned faculty member when topic order or recovery timing needs a choice. | Update timetable dates, available hours and linked lesson-plan timing. | Show the result to the right faculty, manager, administrator and students. |

# What each role may access

*The interface and API apply the same role and scope checks. A visible control is never the security boundary.*

| Capability | Admin | Campus manager | Faculty | Student |
|---|---|---|---|---|
| **All-campus analytics** | Full | — | — | — |
| **Assigned-campus operations** | Full | Full | — | Read only |
| **Semester and calendar maintenance** | Full | Assigned campus | — | — |
| **Subject and faculty assignment** | Full | Assigned campus | — | — |
| **Timetable management** | Full | Assigned campus | View assigned | View enrolled |
| **Lesson plans and lecture logs** | Review | Review campus | Own subjects | View outcomes |
| **Reports** | All campuses | Assigned campus | Own teaching | — |
| **Notifications** | Global / escalated | Campus | Assigned subjects | Relevant results |

## Permission principles

- Campus managers cannot manage another campus.
- Faculty cannot view or edit another faculty member’s subject unless separately assigned.
- Students cannot edit calendars, timetables, plans, logs, progress or user access.
- Changes to teaching history retain the responsible user and time for review.
